**1**

Locate the Make and Model of your satellite dome on this chart and determine which drill hole number yours is. Then place the ADA-R1 Drill Template on top of the ADA-R1 and mark the appropriate holes.

# 2

Drill the four marked holes. Be sure to check with your marine electronic manufacturers manual to determine what size drill bit is needed.

# 3

Apply marine adhesive sealant along the lip in the center hole on the ADA-R1. Route the cabling through the center hole in the ADA-R1. Then insert through the black rubber grommet.

## TIP

Place the connector of the cable into a plastic bag. Apply Vaseline to the exterior of the plastic bag. Then try routing the connector/cable through the black rubber grommet.

**4** Be sure that the Top Plate edge sits in the rubber grommet.

---

**5** Make sure that the Top Plate is facing the forward when mounting
